

Hudson River Park Marine Debris Clean Up

Although our beautiful Hudson River is much cleaner than it once was, marine debris remains a challenge, negatively impacting the river's water quality and wildlife. As dedicated stewards, Hudson River Park's Estuary Lab has made removing marine debris and studying the plastic pollution in our waters central to their work. These initiatives have not only produced award-winning research, they've also helped make our estuary healthier!

Meeting Point: South side of Gansevoort Peninsula (Gansevoort St. and West St.)

Directions: [Google Map](#)

What to wear: Closed toed shoes with good traction (the shoreline is rocky), layered clothing and a hat. You may bring your own work gloves. Provided life jackets must be worn at all times.

Waiver: Each participant must sign a Hudson River Park waiver before beginning cleanup.

Weather: Please see updates from your coordinator in the event of rain.

Join us to help improve conditions in our Hudson River Estuary, aid national efforts to understand and protect our waters, and build a community of dedicated environmental stewards!
